Public trust in Nordic electricity market

Øistein Schmidt Galaaen,
Director Production and Sustainability,
Lahti - Nordic Energy Research Event

Our mission

- Contribute to Norway becoming a zero-emission society with economic growth and value creation based on renewable energy, electrification and other emissions-free energy sources
- Work to ensure that Norway has framework conditions that enable the renewable energy companies to be profitable and competitive, so that they can continue to invest in clean energy.
- Promote sustainable energy solutions and coexistence with other societal interests.

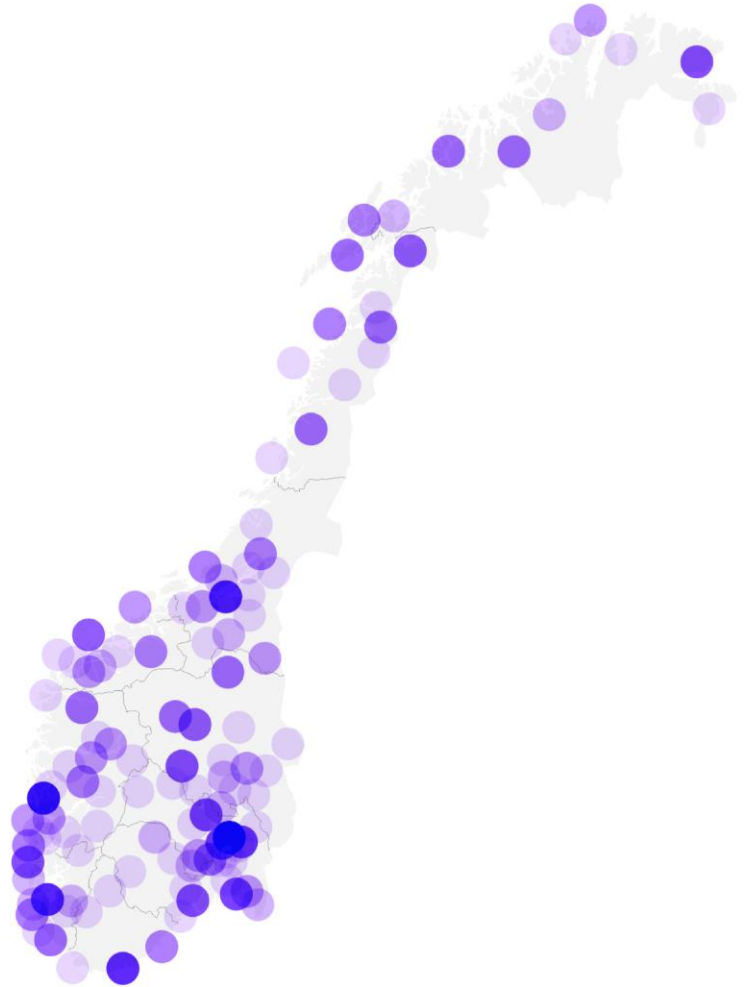

Renewables
Norway

An organization for the entire renewables sector in Norway

- An interest and labor organization representing the Norwegian renewables industry.
- More than 400 members, including renewable energy producers, grid operators, contractors, electricity sales and suppliers, and energy advisers.
- An affiliate of The Norwegian Confederation of Business (NHO), Nordenergi, Eurelectric, WindEurope, Solar Power Europe

A shock to the system

Russia's invasion of Ukraine has led to a period of extraordinary turbulence in energy markets, especially for natural gas.

“Norway Price” for Electricity and District Heating

Press release | Date: 21/05/2025

[Les på norsk](#)

The government proposes allocating NOK 1,265 million to the support scheme for electricity and district heating, called “Norway Price”, for households in 2025. The plan is to introduce the support scheme from the 1st of October 2025.

‘The Norway Price is an important measure to allow people across the country to choose more predictable electricity expenses in a time of fluctuating and occasionally very high electricity prices. Compared to the current electricity support scheme, the Norway Price will make electricity costs more predictable, regardless of where you live in the country. At the same time, we are including district heating in the scheme. Equal treatment of district heating and electricity customers is important for customers, the power grid, and the district heating companies,’ said Minister of Energy Terje Aasland.
