Solution: NOW Ports 2 objectives

To prepare for this massive growth, a large international consortium has been established, where:

- Nordic ports and super sites will enter in innovative collaborations with players in the offshore wind supply chain, with a view towards upgrading, redesigning, and adapting existing facilities and decarbonizing port's infrastructure.
- The goal is to make Nordic ports ready for the expanding offshore wind.
- To inspire other regions around the world, to learn best practices from leading Nordic offshore wind ports and their supply chains.
